

The background of the slide is a light gray grid. Overlaid on this grid are several faint, semi-transparent illustrations of robots and mechanical components. At the top center, there are two robot figures with their arms outstretched, one in a red and blue color scheme and the other in a blue and green scheme. Above them are various mechanical parts like gears, pistons, and small robot heads. To the left, there's a tall, slender robot with a red and blue body. To the right, there's a more bulky robot with a grey and blue body. At the bottom, there are more robot figures, including one with a yellow light on its chest and another with a red and blue body. The overall theme is robotics and mechanical engineering.

POST RELEASE

After release, we plan a few updates that will significantly increase player retention.

Players will be able to connect their premium Spotify accounts and play a level with any track from their library.

We also want to provide a level editor, allowing players to adjust the length and type of each beat of the selected track.

Depending on player feedback, more levels would also be added.

LOOKING FOR

Development funding
QA support
Marketing support
Platform relations
